

# **E-CAFEBIKE**

## **MODEL: AMERICANO**

---

- **Handlebar assembly:**  
Adjust the handlebars to the correct position, then tighten the stem bolts - the tightening torque is indicated on the stem.
  
- **Saddle adjustment**  
Each seat tube has a marked max. extension. Never fix the seat post below this line, there is a risk of frame damage. Tighten the clamp. The saddle must not move or rotate.
  
- **Pedal installation**  
Select the left and right pedals. The marking is usually on the L/R thread. The left pedal also has a reversed thread. The pedal thread must be greased. Our service technicians have applied grease to the internal thread of the cranks, so no further lubrication is required. Screw the pedal in lightly by hand. Then simply tighten with a No. 15 open-end wrench and tighten with all your strength.
